# Care and surgery for foot and ankle trauma.

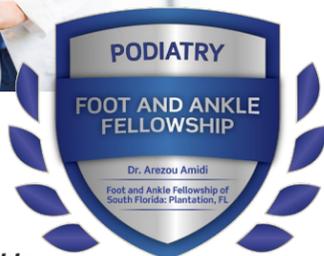

## State-of-the-art podiatry

Our podiatry department offers top-of-the-line care and surgery for trauma of the foot and ankle. If you have foot or ankle pain, you no longer need to suffer or drive out of town to receive state-of-the-art surgical care. We provide podiatry care whether your issue is foot or ankle trauma that requires surgery or if you need routine foot maintenance.

Dr. Arezou Amidi is our fellowship-trained, in-house staff podiatrist and she specializes in surgery and reconstruction. She offers her foot and ankle expertise to treat trauma of the foot, ankle, and lower leg, fractures, soft tissue and tendon repair, sports injuries, wound care, diabetic complications, prescription orthotics, and more.

**Dr. Arezou Amidi, Doctor of Podiatric Medicine, has completed additional surgical training at Foot and Ankle Fellowship of South Florida—a fellowship in Surgery and Reconstruction recognized by the American College of Foot and Ankle Surgeons.**

## Specialized care

Dr. Amidi's parents were both doctors, so she grew up understanding what it means to bring healing to others. When she chose a career in healthcare, she was attracted to podiatry because it is more focused than other specialized areas of medicine.

"I appreciate being able to spend time with a patient and really learn what their needs are. Above all, I want to sincerely care for my patients so they have the best possibility to achieve success in healing," Dr. Arezou Amidi.

In becoming a podiatrist, Dr. Amidi was also accepted into an American College of Foot and Ankle Surgery-recognized fellowship in surgery and reconstruction. Being fellowship-trained means she has greatly expanded her surgical skills and knowledge with hands-on experience over an intensive, post-residency progression. Now she brings that higher level of surgical training in surgery and reconstruction to care for her patients. Having Dr. Amidi as the on-staff podiatry surgeon at Samaritan gives area residents a high-quality choice and state-of-the-art care when surgery is needed.

"I appreciate being able to spend time with a patient and really learn what their needs are," said Dr. Amidi. "It's also important to know that an injury doesn't always require surgery—proper treatment can often provide healing so surgery isn't always necessary."

**"Patients often don't realize that foot or ankle problems can affect posture, ligament stabilization, and other issues. They also need to understand how important it is to follow through with the treatment plan. —Dr. Arezou Amidi,"**

## Specialized fellowship training

Dr. Amidi has completed additional surgical training at Foot and Ankle Fellowship of South Florida—a fellowship in Surgery and Reconstruction recognized by the American College of Foot and Ankle Surgeons. She earned her bachelor's degree in molecular biology at the University of California in San Diego and her Doctor of Podiatric Medicine at Rosalind Franklin University's Scholl College of Podiatric Medicine in Chicago. She was a co-chief resident at Advocate Illinois Masonic Podiatric Residency Program in Chicago.

## Podiatry surgeries and treatments include:

- Surgeries of the foot and ankle
- Fractures of the foot and ankle
- Reconstruction procedures
- Sports injuries
- Soft tissue repair in the lower leg
- Tendon rupture/repair
- Bunions
- Prescription orthotics
- Diabetic foot care
- Relief from plantar fasciitis and heel pain
- Routine foot treatments

## We call it podiatry. You'll call it life-changing.

Dr. Amidi's state-of-the-art podiatry care and treatment mean if you have foot or ankle pain or trauma, you don't need to suffer—you can have it treated and return to pain-free mobility.
